---

Here is how to calculate your MpG before installing any device.

If you do NOT know your exact Baseline you will NOT know what you gained! Please be fair to yourself and our products!

We strongly recommend/require that you fill up your tanks at the same Gas Station, same Pump # and the same Octane Ratings since all of them can change your Gas mileage tremendously!

Pre-Install Apple to Apple test.

- a. Gas Stations \_\_\_\_\_
- b. Pump # \_\_\_\_\_
- c. Fill up completely (to the 2nd or 3d click) and use same procedure each time
- d. Start Mileage \_\_\_\_\_ reset to 0
- e. 3-5 Tanks / maybe around 1000 miles
- f. End Mileage \_\_\_\_\_ read trip miles
- g. Calculate MPG  
total Miles \_\_\_\_\_ / total Gallons used \_\_\_\_\_  
= average MpG \_\_\_\_\_

Post-Install Apple to Apple test.

- a. Gas Stations \_\_\_\_\_
- b. Pump # \_\_\_\_\_
- c. Fill up completely (to the 2nd or 3d click) and use same procedure each time
- d. Start Mileage \_\_\_\_\_ reset to 0
- e. 3-5 Tanks / maybe around 1000 miles
- f. End Mileage \_\_\_\_\_ read trip miles
- g. Calculate MPG  
total Miles \_\_\_\_\_ / total Gallons used \_\_\_\_\_  
= average MpG \_\_\_\_\_

Post Install MpG \_\_\_\_\_ / Pre Install MpG \_\_\_\_\_  
= \_\_\_\_\_ - 1x100 = \_\_\_\_\_ % in gain

Example:

Post Install MpG 16 / Pre Install MpG 14 = 1.1428.... -  
1x100 = 14.28 % in
